        setContentView(R.layout.activity_main)
    }
}
```

## SampleCanvas.kt

```
package org.rajalakshmi.graphicalprimitives

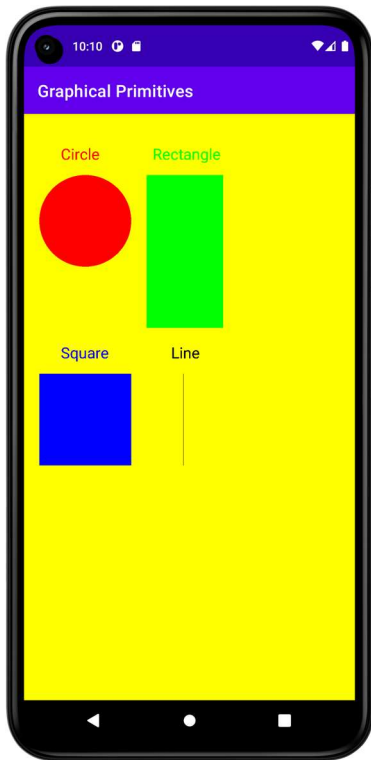

import android.content.Context
import android.graphics.Canvas
import android.graphics.Color
import android.graphics.Paint
import android.util.AttributeSet
import android.view.View

class SampleCanvas @JvmOverloads constructor(
    context: Context, attrs: AttributeSet? = null, defStyleAttr: Int = 0
) : View(context, attrs, defStyleAttr) {

    override fun onDraw(canvas: Canvas?) {
        super.onDraw(canvas)

        val paint : Paint = Paint()
        paint.setColor(Color.YELLOW)
        canvas?.drawPaint(paint)
        paint.setTextSize(50f);
        paint.setColor(Color.RED);
        canvas?.drawText("Circle", 120f, 150f, paint);
        canvas?.drawCircle(200f, 350f, 150f, paint);
        paint.setColor(Color.GREEN);
        canvas?.drawText("Rectangle", 420f, 150f, paint);
        canvas?.drawRect(400f, 200f, 650f, 700f, paint);
        paint.setColor(Color.BLUE);
        canvas?.drawText("Square", 120f, 800f, paint);
        canvas?.drawRect(50f, 850f, 350f, 1150f, paint);
        paint.setColor(Color.BLACK);
        canvas?.drawText("Line", 480f, 800f, paint);
        canvas?.drawLine(520f, 850f, 520f, 1150f, paint);
    }
}
```

## Output

## Result

**Ex. No. : 04**

**Date :**

**Register No. :**

**Name :**

---

### **Android Fragments**

#### **Aim**

Develop an android application to create two activities named as Student Basic Details (Register No., Name, Department) and Student Mark Details (SSLC, HSC, UG). Write an android code to combine these two activities in single screen using android fragment.

#### **Procedure**

## AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools">

    <application
        android:allowBackup="true"
        android:dataExtractionRules="@xml/data_extraction_rules"
        android:fullBackupContent="@xml/backup_rules"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:supportsRtl="true"
        android:theme="@style/Theme.AndroidFragments"
        tools:targetApi="31">
        <activity
            android:name=".MainActivity"
            android:exported="true">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>

</manifest>
```

## activity\_main.xml

```
<?xml version="1.0" encoding="utf-8"?>

                }
            }
    }
}
```

## Output

The screenshot shows an Android application interface with a purple header bar containing the text "Android Fragments". Below the header, the title "Student Details" is displayed, followed by the subtitle "Basic Details". The form consists of three input fields: "Register No." with the placeholder "Register Number", "Name" with the placeholder "Name", and "Department" with the placeholder "Department". Below these fields, the title "Mark Details" is shown. This section contains three more input fields: "S.S.L.C." with the placeholder "S.S.L.C. Mark", "H.Sc." with the placeholder "H.Sc. Mark", and "U.G." with the placeholder "U.G. C.G.P.A.". The bottom of the screen shows the standard Android navigation bar with back, home, and recent apps buttons.

## Result

**Ex. No. : 05**

**Date :**

**Register No. :**

**Name :**

---

## **SQLite**

### **Aim**

Create a Database table with the following structure using SQLite: Student (Register Number, Name, CGPA). Develop an android application to perform the following operation using SQLite developer classes. 1. Insert student Details 2. Update the student Record 3. Delete a specified record. 4. View the details.

### **Procedure**

## AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"

### **Form Validation**

#### **Aim**

Design an android activity with two text boxes where the user can enter (username and ID) and a button (validate). Validate the entered username and ID field for the following using android code. i) Both the fields should not be empty ii) Name field should have alphabets iii) ID field should have numeric values (only 4-digit).

#### **Procedure**

## AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools">

    <application
        android:allowBackup="true"
        android:dataExtractionRules="@xml/data_extraction_rules"
        android:fullBackupContent="@xml/backup_rules"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:supportRtl="true"
        android:theme="@style/Theme.FormValidation"
        tools:targetApi="31">
        <activity
            android:name=".MainActivity2"
            android:exported="false" />
        <activity
            android:name=".MainActivity"
            android:exported="true">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

### **Speech to Text**

#### **Aim**

Develop an android application to perform Speech to Text.

#### **Procedure**

## AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools">
    <application
        android:allowBackup="true"
        android:dataExtractionRules="@xml/data_extraction_rules"
        android:fullBackupContent="@xml/backup_rules"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:supportRtl="true"
        android:theme="@style/Theme.SpeechToText"
        tools:targetApi="31">
        <activity
            android:name=".MainActivity"
            android:exported="true">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>
</manifest>
```

## activity\_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    tools:context=".MainActivity">

    <ImageView
        android:id="@+id/imgMic"
        android:layout_width="match_parent"
        android:layout_height="250dp"
        app:srcCompat="@android:drawable/ic_btn_speak_now" />

    <TextView
        android:id="@+id/tvText"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:text="Output appears here...!"
        android:textSize="24sp" />
</LinearLayout>
```

## MainActivity.kt

```
package org.rajalakshmi.speechtotext

import android.content.Intent
import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import android.speech.RecognizerIntent
import android.widget.ImageView
import android.widget.TextView
import java.util.*

class MainActivity : AppCompatActivity() {
    lateinit var tvText : TextView
    private val REQUEST_CODE_SPEECH_INPUT = 1000
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)

        var imgMic : ImageView = findViewById(R.id.imgMic)
        tvText = findViewById(R.id.tvText)
        imgMic.setOnClickListener {
            val intent = Intent(RecognizerIntent.ACTION_RECOGNIZE_SPEECH)
            intent.putExtra(RecognizerIntent.EXTRA_LANGUAGE_MODEL,
                RecognizerIntent.LANGUAGE_MODEL_FREE_FORM)
            intent.putExtra(RecognizerIntent.EXTRA_LANGUAGE,
                Locale.getDefault())
            intent.putExtra(RecognizerIntent.EXTRA_PROMPT, "Speak...!")
            startActivityForResult(intent, REQUEST_CODE_SPEECH_INPUT)
        }

        override fun onActivityResult(requestCode: Int, resultCode: Int, data:
            Intent?) {
            super.onActivityResult(requestCode, resultCode, data)
            if(requestCode == REQUEST_CODE_SPEECH_INPUT && resultCode == RESULT_OK
                && data != null) {
                var res : ArrayList<String> =
                    data.getStringArrayListExtra(RecognizerIntent.EXTRA_RESULTS) as
                    ArrayList<String>
                tvText.setText( Objects.requireNonNull(res)[0])
            }
        }
    }
}
```
